

Week 5 Work Summary

Chateaugay Lakes, NY

Summary

Chateaugay Lake Milfoil Removal Report

8/8/11 – 8/11/11

*Numbered areas referred to in report are indicated above

*Bags estimated to weigh approximately 25 pounds each

Week 5

This week we harvested 292 bags from the boat launch area. We started with a bed on the western side of the narrows around 200 yards to the north of the boat launch. This area we found some dense old growth milfoil. From there we moved over to the eastern side of the narrows where the bed continued to run all the way into the cove where the boat launch is. The boat launch cove was probably the densest area harvested, primarily toward the middle of the narrows. Based on diver observations this was most likely due to frequent boat traffic.

Bags Total: 292

Estimated Weight: 7,300 lbs

2011 Totals

	Bags Harvested	Est. Weight (lbs)
Week 1	109	2,725
Week 2	190	4,750
Week 3	345	8,625
Week 4	441	11,025
Week 5	292	7,300
2011 Totals	1,377	34,425
